RS485 power monitoring devices

DIRIS B-30
RS485

Function

The **DIRIS B-30** is a power monitoring device in a modular format that communicates via RS485. The 4 RJ12 independent current inputs of the device allow it to manage several types and number of circuits: for example, 4 single-phase loads or 1 three-phase load + 1 single-phase load.

Advantages

Plug & Play

A rapid RJ12 connection makes wiring easy and reliable and prevents wiring errors. Automatically addressing and configuring the product (communication address, load type, type and ratio of current sensor) allow you to simplify implementation and to save time.

Class 0.5 in accordance with ANSI C12.20 and IEC 61557-12

- Class 0.2 for the meter alone.
- Class 0.5 from 2% to 120% of nominal current for the global measurement chain (associated with TE/TF current sensors).

The DIRIS B-30 is connected to current sensors⁽¹⁾ (RJ12 connection) that are suitable for all types of installation: solid TE, split-core TR, and flexible TF current sensors.

(1) See page 42.

Multi-circuit

- 4 current measurement inputs allow you to configure multiple circuits in order to optimize the number of measurement devices per installation.

Communication

- The DIRIS B-30 can be connected to:
 - a remote DIRIS D-30 screen for displaying measurement and metering data.
 - a DIRIS G⁽¹⁾ gateway for centralization and communication of data via RS485 and Ethernet.
 - optional modules can be used to add digital, analog or temperature inputs/outputs.

Connections

Associated current sensors

Various types of current sensors can be connected to the DIRIS Digiware: Solid TE , split-core TR , flexible TF current sensors. This range of sensors can be adapted to all types of new or existing installations. A rapid RJ12 connection makes wiring easy and reliable and prevents wiring errors. The DIRIS B-30 automatically recognizes the sensor size and type. This guarantees the overall accuracy of the DIRIS B-30 + current sensor measurement chain.
